## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 3\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Rosh is intrigued by numerical patterns. Today, she stumbled upon a puzzle while working with arrays. She wants to compute the sum of the third-largest and second-smallest elements from a list of integers. She seeks your help to implement a program that solves this for her efficiently.

##### ***Input Format***

The first line of input is an integer N, representing the size of the array.

The second line of input consists of N space-separated integers, representing the elements of the array.

##### ***Output Format***

The output displays a single integer representing the sum of the third-largest and second-smallest elements in the array.

Refer to the sample output for the formatting specifications.

**Sample Test Case**

Input: 10

10 20 30 40 50 60 70 80 90 100

Output: 100

**Answer**

```
import java.util.*;
class main{
    public static void main(String[] args){
        Scanner s = new Scanner (System.in);
        int n = s.nextInt();
        int[] arr = new int[n];
        for(int i=0; i<n;i++){
            arr[i]=s.nextInt();
        }
        Arrays.sort(arr);
        int small = arr[1];
        int large =arr[n-3];
        int sum = small+large;
        System.out.println(sum);
    }
}
```

**Status :** Correct

**Marks :** 10/10
